PROFESSIONAL SUMMARY

Fullstack Software Engineer with production experience delivering mission-critical financial platforms at Ecobank Nigeria — one of Africa's largest pan-African banking groups. Specialises in Java (Spring Boot 3) microservices, event-driven architecture with Apache Kafka, and React/TypeScript frontends. Has shipped CBN-compliant regulatory systems, real-time payment integrations (NIBSS NPS/FAS), and internal operations tooling across a network of 500+ bank branches. Brings strong backend architecture fundamentals alongside full frontend ownership — including state management, compliance-gated UX flows, and performance optimisation.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, SQL, C#, PHP

Backend: Spring Boot 3, Spring Security (OAuth2/JWT), Microservices, Apache Kafka, Hibernate/JPA, REST API Design, Spring Cloud, API Gateway

Frontend: React 18, Next.js 15, TanStack Query (React Query), TanStack Table, Zustand, Redux Toolkit, Tailwind CSS, Shadcn UI, Server-Side Rendering (SSR)

DevOps & Tooling: Docker, Docker Compose, GitHub Actions, Git, Nginx, Postman, Swagger (OpenAPI), Vite, AWS (EC2, S3, IAM, VPC — in progress)

Testing: JUnit 5, Mockito

Databases: PostgreSQL, MySQL, MS SQL Server, MongoDB

PROFESSIONAL EXPERIENCE

Ecobank Nigeria | **Software Engineer — Technology Innovations** *Apr 2024 – Present*

- **Cheque Tracking Portal:** Architected and delivered a centralized React 18 / TypeScript enterprise portal replacing a fragmented paper-based process for tracking physical chequebook lifecycles across CCPU, Mailroom, and 500+ branches. Implemented strict client/server state separation (TanStack Query for server state, Zustand for draft state), compliance-gated AlertDialogs for all mutation flows, and a hybrid filtering strategy — client-side useMemo for bounded datasets and URL-parameter pagination for large ones — eliminating a category of reconciliation errors caused by uncollected and misrouted chequebooks.
- **Compliance Reporting Automation System (CRAS):** Engineered a full-stack regulatory reporting platform (Spring Boot + React) replacing manual Excel-based submissions with a Maker-Checker approval workflow and immutable digital audit trails — achieving 100% on-time CBN submission rate and eliminating recurring report rejections caused by data-entry errors.
- **NIBSS Financial Authentication Service (FAS):** Integrated the NIBSS FAS API with core banking infrastructure, enabling 500+ branches to perform real-time BVN/NIN identity validation at the point of service — streamlining KYC processes, reducing manual identity verification bottlenecks, and strengthening fraud prevention across the entire branch network.
- **Card Distribution Tracking System:** Built an automated SMS/email notification platform connecting Card Operations to 500+ branches — replacing manual coordination, providing real-time delivery visibility, and measurably improving card collection rates by reducing the volume of uncollected cards and customer escalations.
- **ATM Inventory System:** Developed a CBN-compliant ATM reporting dashboard serving 500+ branches, tracking real-time transaction data and cash inventory — replacing error-prone manual Excel logs with a centralised automated system that eliminated reporting inaccuracies and ensured continuous NIBSS regulatory compliance.
- **Transaction Charges & Legal Search Automation:** Integrated core banking services to automate real-time charge processing for statement requests and relationship letters across 500+ branches — eliminating manual charge collection entirely, closing a recurring revenue leakage gap, and generating direct cost savings for the bank through accurate, auditable transaction debiting that replaced a previously error-prone manual process.
- **NIBSS National Payment Stack (NPS):** Integrated the CBN-mandated NPS service across multiple payment channels, enabling the bank to participate in the pilot phase of Nigeria's new national payment infrastructure and meeting all regulatory go-live deadlines.
- **Internal Operations Tools:** Digitised the Law Enforcement Agent (LEA) request workflow across 500+ branches and engineered a Critical Action Buzzer for panic routing — replacing manual, phone-based escalation chains with structured digital audit trails that improved response times for sensitive regulatory and security incidents. Working within the context of Ecobank's ongoing GCP migration partnership with Google.

Rural Electrification Agency | **Frontend Developer (Intern)** *Jan 2023 – Jan 2024*

- Collaborated within a cross-functional Agile team to re-architect the agency's public web presence to a mobile-first responsive design using React and modern JavaScript, migrating from a legacy codebase and improving cross-device accessibility compliance.
- Participated in sprint planning and stakeholder review cycles, delivering reusable interactive UI components and prototypes that accelerated stakeholder approval by 3 weeks across multiple project phases.
- Optimised frontend performance across rural electrification data dashboards, improving Lighthouse scores for core load speed and accessibility metrics.

NNPC Limited | **Network Engineer Intern** *Apr 2021 – Oct 2021*

- Resolved 90% of network incidents within 1 hour for 500+ corporate users; reduced latency by 25% across Abuja office sites by optimising Cisco router and switch configurations.

SELECTED PERSONAL PROJECTS

Event Booking Microservices Platform · *Java 21, Spring Boot 3, Apache Kafka, Docker Compose*

- Architected an event-driven microservices system (User, Event, Booking, Notification services) with a centralised API Gateway, custom JWT authentication, and Token Relay pattern for secure service-to-service context propagation — deployed end-to-end with Docker Compose.
- Implemented Apache Kafka for asynchronous inter-service messaging to decouple service workloads and handle high-volume notification delivery without synchronous coupling.

Fullstack E-Commerce Platform · *Next.js 15, Spring Boot 3, TypeScript, Paystack*

- Built a full-stack e-commerce platform with a Spring Boot RESTful API handling complex order processing and OAuth2/JWT authentication, integrated with the Paystack payment gateway using webhook verification for real-time transaction status updates.
- Delivered a performant Next.js 15 (App Router) frontend with Server-Side Rendering (SSR) for SEO and Zustand for client state management, optimised for both Lighthouse performance scores and search engine visibility.

EDUCATION & CERTIFICATIONS

B.Eng. Computer Engineering · Bells University of Technology
ITIL v4 Foundation Certification
Foundational C# with Microsoft
